SUMMARY

Backend Developer with 1+ year of DevOps-focused internship experience in Kubernetes, Docker, and multi-cloud environments (AWS, Azure, GCP). Built infrastructure-as-code tools and AI-powered resource tagging systems using Go. Open source contributor to GoFr framework. Hands-on with container orchestration, cloud automation, CI/CD, and Linux administration. 1000+ LeetCode problems solved.

TECHNICAL SKILLS

Languages: Go, Python, Bash/Shell Scripting, Java, C++, SQL, JavaScript

Backend & Frameworks: GoFr, Node.js, Express.js, REST APIs, Microservices, HTTP Servers, SDK Design

Containers & Cloud: Docker, Kubernetes, AWS, Azure, GCP, Infrastructure as Code

DevOps & CI/CD: Git, GitHub, GitHub Actions, Linux Administration, Shell Scripting, Cron, Monitoring

Databases & Tools: MongoDB, SQLite, MySQL, PostgreSQL, JIRA, Postman, Vim

WORK EXPERIENCE

Backend Developer Intern | *zop.dev* | June 2025 - Present

- Spearheaded IaC backend services in Go and GoFr; improved cloud resource management by 40% across AWS, Azure, and GCP.
- Designed and developed a high-performance Kubernetes deployment orchestration system in Go, enabling rapid, automated, and resilient deployments across multi-cloud environments.
- Developed AI-powered auto-tagging engine analyzing metadata across all providers; achieved 95% prediction accuracy for tags.
- Streamlined Kubernetes cluster operations including deployments, scaling, and config management; cut deployment time by 30%.
- Implemented automated cloud provisioning and teardown workflows in Go; reduced monthly infrastructure costs by 30%.
- Reduced system complexity by 25% by refactoring monolithic services into modular Go microservices with Agile sprints.

OPEN SOURCE CONTRIBUTIONS

GoFr Framework | *Go, Open Source*

- Active open source contributor to GoFr, a Go microservice framework; shipped merged PRs for new features, bug fixes, and participated in code reviews with maintainers.

PROJECTS

CloudEmu | *Go, AWS, Azure, GCP, SDK, HTTP Server, Open Source*

- Founded CloudEmu, a fast-growing open-source Go library for zero-cost cloud emulation; adopted by 1000+ developers across AWS, Azure, and GCP.
- Extended with SDK-compatible interface and HTTP server as drop-in SDK replacement; in-memory engine delivers ~10ms tests, eliminating 100% CI/CD cloud costs.

Smart Backup & Compression System | *C++, Shell Scripting, Linux, Git, Cron*

- Developed CLI backup tool in C++ with LZ77 compression; achieved 60% storage reduction with cron scheduling and Git tracking.

Smart Catalogs | *FastAPI, Python, Flask, SQLite3, REST API*

- Engineered image processing platform using FastAPI and OpenCV; automated product data extraction, reducing entry time by 60%.
- Built SQLite3 CRUD layer with category tagging and search filters; deployed via Flask serving 200+ product listings.

RozgarSite | *Go, GoFr, MySQL, REST API*

- Built RESTful job-matching API in Go and GoFr with MySQL; implemented auth middleware, search APIs, and error handling.
- Solved rural worker discovery problem by building location-based job matching with MySQL spatial queries; enabling nearby employer-worker connections in underserved areas.

EDUCATION

B.E. - Computer Science & Engineering | Chitkara University, Rajpura, Punjab | 2022 - 2026 | CGPA: 9.14/10

ACHIEVEMENTS & CERTIFICATIONS

- 1000+ LeetCode (1500 rating) | 2-Star CodeChef | 5-Star HackerRank | 3rd Smart Cataloging Hackathon | IBM ML Certificate
